Top Lift 2.35 TSAP INOX Design

The Top Lift 2.35 TSAP is a 2-pistons-lifts with flat runways and an integrated adjustable wheel-free lift. The lift and wheel-free lift have a lifting capacity of 3.500 kg. The synchronization works with a galvanized cross-beam in the installation canister which also avoids the rotation of the pistons.

INOX Design – Innovation with new materials

The car reception is equipped with 4 Top Lift TSAP in INOX Design.

The INOX Design combines wood, steel and stainless steel. Under the V2A high-grade stainless steel, we apply a Multiplex plywood board. The 4 cm thick boards guarantee a high form stability and strength.

The surface out of corrugated stainless steel protects the lift against corrosion and has an appealing appearance. The reinforced profiles of the runways' frames increased the stability of the lift.
